

Introducing MARC

Modular Aluminum Remountable Command

A lightweight, strong, solid formed, welded body that is designed to fit onto a standard pick-up truck chassis, thus offering a robust alternative to standard pick-up (with cap) or SUV set-ups. The MARC boasts over 205 cu. ft. of storage area and its modular design allows for fully custom compartment layouts. Being remountable, the MARC provides a lower total cost of ownership over traditional vehicle conversions.

Solid Body

Lightweight formed solid body construction

Custom Layouts

Fully customized command and rescue center layouts

Modular Design

Open platform interior for fully custom, modular compartments
